IN THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application.

1. -16. (Canceled)

17. (Previously Presented) A method of controlling an automotive vehicle and a trailer comprising:

determining a presence of a trailer; and

applying at least one trailer brake and at least one vehicle brake to brake-steer the vehicle and trailer in response to the presence of the trailer to reduce a vehicle turning radius of the vehicle and trailer.

- 18. (Original) A method as recited in claim 17 further comprising generating a reverse direction signal of the vehicle and applying brake-steer in response to the reverse direction signal.
- 19. (Original) A method as recited in claim 18 wherein generating a reverse direction signal comprises generating a reverse direction signal from a shift lever.
- 20. **(Original)** A method as recited in claim 18 wherein generating a reverse direction signal comprises generating a reverse direction from a push button.
- 21. **(Original)** A method as recited in claim 18 wherein generating a reverse direction signal comprises generating a reverse direction from a transmission controller.

Response to Office Action of 02-05-09

- 22. (Original) A method as recited in claim 18 wherein generating a reverse direction signal comprises generating a reverse direction from a wheel speed sensor relative to a first wheel.
- 23. (Original) A method as recited in claim 17 wherein determining a presence of a trailer comprises determining the presence of a trailer with a hitch sensor.
- 24. **(Original)** A method as recited in claim 17 wherein determining a presence of a trailer comprises determining the presence of a trailer with a reverse aid sensor.
- 25. (**Original**) A method as recited in claim 17 wherein determining a presence of a trailer comprises determining the presence of a trailer with an ultrasonic sensor.
- 26. (Original) A method as recited in claim 17 wherein determining a presence of a trailer comprises determining the presence of a trailer with a camera.
- 27. (**Original**) A method as recited in claim 17 wherein determining a presence of a trailer comprises determining the presence of a trailer with a harness current.
- 28. (Original) A method as recited in claim 17 wherein determining a presence of a trailer comprises determining the presence of a trailer with a manually activated mechanism.
- 29. (Original) A method as recited in claim 17 further comprising determining a position of the trailer and applying at least one trailer brake and at least one vehicle brake in response to the position.

Response to Office Action of 02-05-09

- 30. (Original) A method as recited in claim 17 wherein applying brake-steer to the vehicle in response to the trailer to enhance control of the trailer relative to the vehicle comprises applying brake-steer to reduce the turning radius of the vehicle.
- 31. (Previously Presented) A control system for an automotive vehicle and a trailer having a brake comprising:

means to determining the presence of a trailer;

a controller coupled to the means, said controller programmed to apply brakesteer to the vehicle and the trailer brakes to reduce the turning radius of the vehicle and trailer in response to the presence of the trailer.

- 32. (Original) A system as recited in claim 31 wherein said means to determine the presence of a trailer comprises a hitch sensor.
- 33. (Original) A system as recited in claim 31 wherein said means to determine the presence of a trailer comprises a reverse aid sensor.
- 34. (Original) A system as recited in claim 31 wherein said means to determine the presence of a trailer comprises an ultrasonic sensor.
- 35. (Original) A system as recited in claim 31 wherein said means to determine the presence of a trailer comprises a camera.
- 36. **(Original)** A system as recited in claim 31 wherein said controller is programmed to apply brake-steer by applying a first brake and a second brake to reduce the tuming radius of the vehicle.

Response to Office Action of 02-05-09

- 37. **(Original)** A system as recited in claim 31 wherein said controller is programmed to apply brake-steer by applying at least one brake at a first wheel to reduce a vehicle turning radius.
- 38. **(Original)** A system as recited in claim 31 wherein said controller is programmed to brake-steer by applying an increased drive torque to a second wheel relative to the first wheel.
- 39. (Previously Presented) A system as recited in claim 31 further comprising a steering wheel angle sensor generating a steering wheel angle signal, said controller programmed to apply brake-steer in response to a reverse direction signal and the steering wheel angle signal.
- 40. (Previously Presented) A system as recited in claim 31 further comprising a yaw rate sensor generating a yaw rate signal, said controller programmed to apply brake-steer in response to a reverse direction signal and yaw rate signal.
- 41. **(Previously Presented)** A system as recited in claim 31 further comprising a steering wheel torque sensor generating a steering torque signal, said controller programmed to apply brake-steer in response to a reverse direction signal and steering torque signal.
- 42. **(Currently Amended)** A system as recited in claim 31 further comprising a steering wheel angle sensor generating a steering wheel angle signal and a vehicle velocity sensor generating a vehicle velocity signal, said controller programmed to apply brake-steer in response to a reverse direction signal, steering wheel angle and vehicle [[velocity signal]] velocity signal.

Response to Office Action of 02-05-09

43. **(Original)** A system as recited in claim 31 further comprising means to determine a trailer position, said controller programmed to apply brake-steer in response to the trailer position.
